

# Basic Course BioPAT® MFCS/win 3.1 User Training

This training is primarily directed towards persons starting with a new BioPAT® MFCS/win system or using BioPAT® MFCS/win for their daily work. The target of the training is to convey handling with the Batch-Management, Sample-Management, Plots and creation of fermentation documentation. Furthermore training for creation of calculations, profiles and using of recipes will be provided. The participants will have notebooks for hands on training.

Topics included:

- Introduction into SCADA-System BioPAT® MFCS/win
- Shell and Service Control Program
- Data Storing and Batch Management
- Process Visualization with Operator Service
- Batch Start, Batch Setup and Initialize defined Batch
- Process automation with S88 Recipes (Using and Modification)
- Off-line Data Management
- Evaluation by Plotting
- Reporting of Batches and Data export
- Help-Documentation

Extensive documentation is available. The training is held in English language.

Answering questions from participants may exceed the announced content of the training. The time of training is limited in principle to 8 hours, may vary however depending on learning speed and additional questions.

A certificate is handed out to each participant.
